

## **Recruitment of Sample Management Lab Coordinator, MinervaX, Lund**

MinervaX offers you an important position in a rapidly growing and successful international oriented company.

The position is within the Sample Management Team supporting the vaccine functional assay and immunoassay teams with handling clinical samples. The position is based in MinervaX Laboratory facility in Lund, Skåne, responsible for clinical sample analysis and research for ongoing clinical trials on a maternal GBS vaccine candidate.

### **Job description**

The candidate will play an important role in the Sample Management team, which we are expanding to build up a bigger team. The team is responsible for supporting 3 other teams within all tasks related to clinical sample handling. The primary focus will be hands-on work with clinical sample registration, documentation, storage, picking and aliquoting.

### **Main job functions in details**

- Clinical sample receipt, registration (serum samples, breastmilk, and bacterial culture samples)
- Aliquoting and labelling samples (automatic and manual workflow)
- Overseeing and controlling freezer storage
- Handling of electronic lab book systems and daily documentation
- Sample management and working with the laboratory teams on picking and selecting samples for analyses

### **Job Requirements**

- Biomedical analyst or equivalent experience in handling and documenting human clinical samples within a laboratory facility
- Experience in working with sterile workflows when handling samples
- Well-founded in spoken English, since this is company language

- Availability to start as soon as possible is preferred; however, flexibility can be considered for the right candidate.

## Personal Attributes

You are comfortable working in a dynamic and fast paced environment, but you need to bring a high sense quality, structure and precision for this role. You like routine processes, and you like to immerse yourself into details, and since you will have a dedicated role in managing all clinical samples in lab and need to “own” this role. Structure, control, calm and checklists are buzzwords to your personality. You have high collaborative skills, and you are a dedicated team player, since you will be working across all teams in the lab.

## MinervaX

MinervaX is a Danish biotechnology company, established in 2010 to develop a prophylactic vaccine against Group B Streptococcus (GBS), based on research from Lund University. MinervaX is developing a GBS vaccine for maternal immunization, likely to have superior characteristics compared with other GBS vaccine candidates in development. The latter are based on traditional capsular polysaccharide (CPS) conjugate technology. By contrast, MinervaX's vaccine is a protein-only vaccine based on fusions of highly immunogenic and protective protein domains from selected surface proteins of GBS (the Alpha-like protein family). Given the broad distribution of proteins contained in the vaccine on GBS strains globally, it is expected that MinervaX's vaccine will confer protection against virtually 100% of all GBS isolates. The laboratory facility is based in Lund, Sweden.

## Recruitment

Please submit your application to [careers@minervax.com](mailto:careers@minervax.com). All applications must be in English and are treated confidentially. Please add “*Sample Management Lab Coordinator*” in subject when applying. For further details about the job and the Company, please contact Director Analytical Quality, Nikolaj Dam Mikkelsen (+45 26 70 10 66) or VP Bioanalysis & Analytical Quality, Tina Biehl (+45 30 77 03 03). Application will be screened and interviews conducted on an ongoing basis.
